Exp 4: Create a visual representation in Figma highlighting the key elements of mobile network protocol stacks.

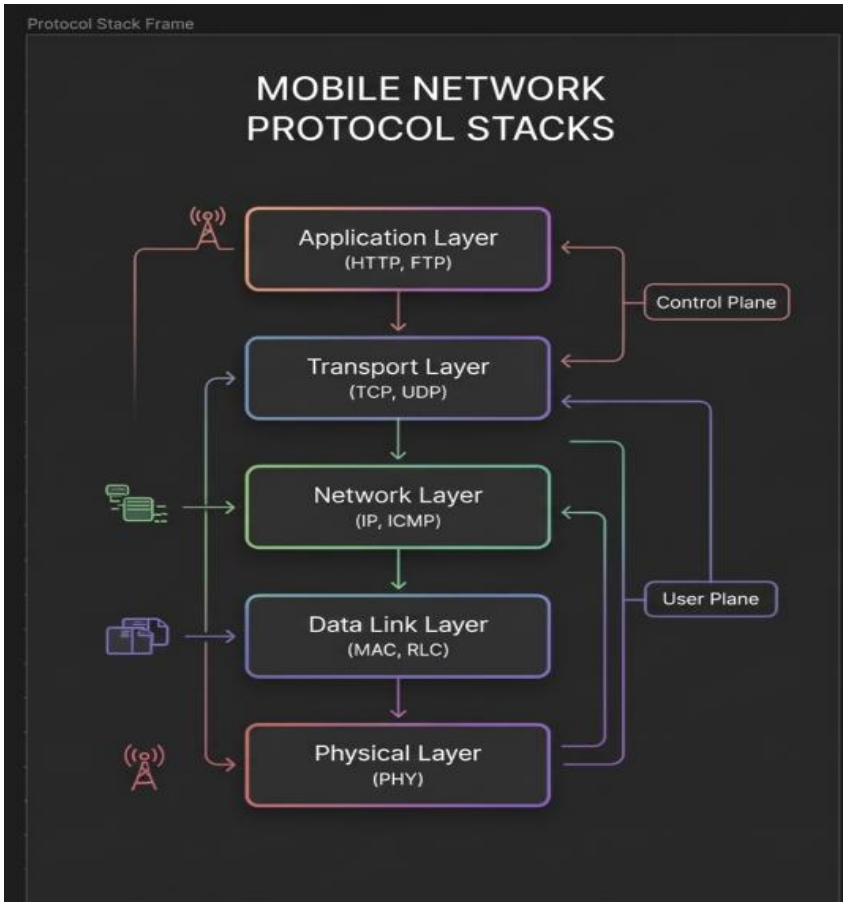

Aim

To design a clear, minimalistic visual diagram in Figma illustrating the key layers and control/user plane pathways of mobile network protocol stacks.

Procedure:

1. Launch Figma and create a dedicated canvas frame named "Protocol Stack Frame".
2. Set a dark canvas background fill (`#1E1E1E` or `#121212`) for high contrast.
3. Insert a bold centered title: "MOBILE NETWORK PROTOCOL STACKS".
4. Draw five uniform rounded rectangles vertically aligned to represent each layer.
5. Label the top layer as Application Layer (HTTP, FTP).
6. Label the middle layers as Transport Layer (TCP, UDP) and Network Layer (IP, ICMP).
7. Label the lower layers as Data Link Layer (MAC, RLC) and Physical Layer (PHY).
8. Add vector flow arrows connecting the layers sequentially from top to bottom.
9. Add distinct side tags and routed indicator paths for Control Plane and User Plane.
10. Apply subtle neon gradient strokes and place contextual icons (antenna, packets, data) beside the layers.

Design:

Result

A clean, modern visual representation of mobile network protocol stacks was successfully created in Figma, effectively mapping data flow across all architectural layers
